AI-native GRC for the compliance stack that quietly underwrites *your portfolio.*

Stratasynthia automates governance, risk and compliance top-down and grounds-up — across 10+ frameworks, 350+ controls, and 15+ integrations, priced at \$15/month against incumbents charging \$5,000+ a year.

SCROLL ↓

The compliance industry is priced for the past. We aren't.

Stratasynthia is an AI-native GRC platform that automates the entire compliance lifecycle — evidence collection, control monitoring, audit prep, remediation — across modern cloud and SaaS stacks.

Underneath sits something the incumbents don't have: a **Boolean LLM Engine**, open-sourced by our team, that uses Microsoft-backed Z3 to rigorously *prove* logical conflicts inside control sets. We've already detected real conflicts in **ISO/IEC 27001:2022** and **SOC 2**.

The engine is a commercial product on its own. The platform is the wedge.

Cloudflare, prev. 30 days

01 AI-native GRC, built top-down and grounds-up — not a workflow wrapper on a SOC 2 checklist.

02 Open-source Boolean LLM Engine validated by Z3 — formal, falsifiable, defensible.

03 1/300th the price point of Drata, Vanta, MetricStream — a category re-rate, not a feature war.

04 Inbound from US, Canada, Brazil, UK, NL — global pull on day one of the product page.

Manual compliance was **never going to scale** with modern cloud.

Three structural failures keep GRC stuck in 2014 — and they compound the moment a portfolio company hits Series B.

01

Siloed evidence

Audit artefacts scatter across AWS, GitHub, Jira, Slack, Confluence, HR systems. Engineering teams spend days re-hunting the same screenshots every quarter.

02

Time-consuming audits

Manual prep consumes **days to weeks** of senior engineering bandwidth per audit cycle — multiplied by every framework the company adds.

03

Lost accountability

Findings get filed and forgotten. Ownership is fuzzy, escalation is manual, drift goes unnoticed until the next audit re-surfaces it.

A \$50B+ category being underwritten on 2014 economics.

Drata, Vanta, MetricStream all charge \$5,000 – \$60,000+ per year per company. That's tenable for a Series B+ enterprise — and prohibitive for the 7-person FinServ and HealthTech startups our

investors are actually backing.

Compliance is no longer optional at seed — SOC 2, ISO 27001, HIPAA, DPDP, PCI DSS are gates on enterprise revenue. The TAM is the entire bottom half of the cloud market that incumbents priced themselves out of.

//

Modern engineering teams need continuous compliance without the overhead. Built for AWS, SaaS, and internal systems out of the box.

Two layers. One **defensible stack**.

A SaaS platform on top, an open-source reasoning engine underneath. Each can be sold; together they compound.

LAYER 01 • GRC PLATFORM

Continuous compliance across the modern stack.

Unified evidence

Auto-collect from AWS, Slack, Jira, Confluence, GreytHR — one source of truth.

Continuous control monitoring

Real-time signals, automated alerts when controls drift.

Intelligent remediation

Assign, track and resolve findings with routing and escalation.

A reasoning core that *proves* compliance logic.

We don't *guess* at conflicts. **We prove them.**

Every GRC vendor will claim 'AI mapping.' Stratasynthia is the only one that runs the result through a Z3 SMT solver and tells you exactly which controls are logically irreconcilable.

01 Parse natural-language control text

Frameworks describe requirements in prose. The engine lifts each clause into a typed logical statement.

02 Encode as Boolean constraints

Permissions, separations of duty, temporal conditions — all reduced to a constraint system.

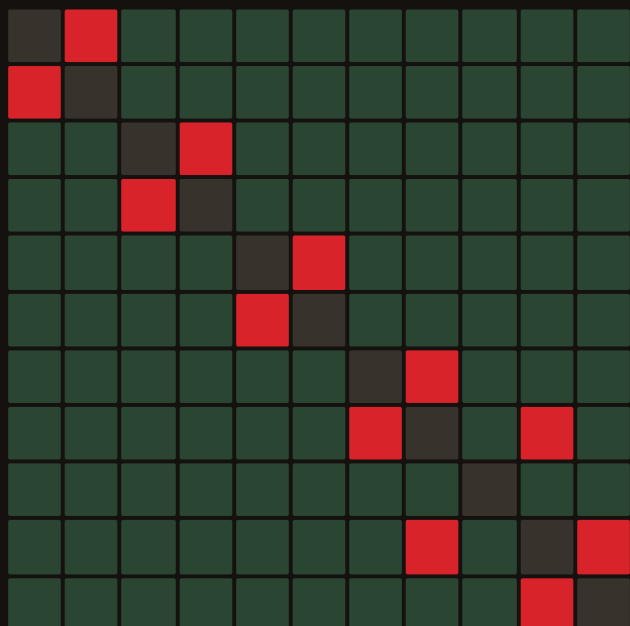

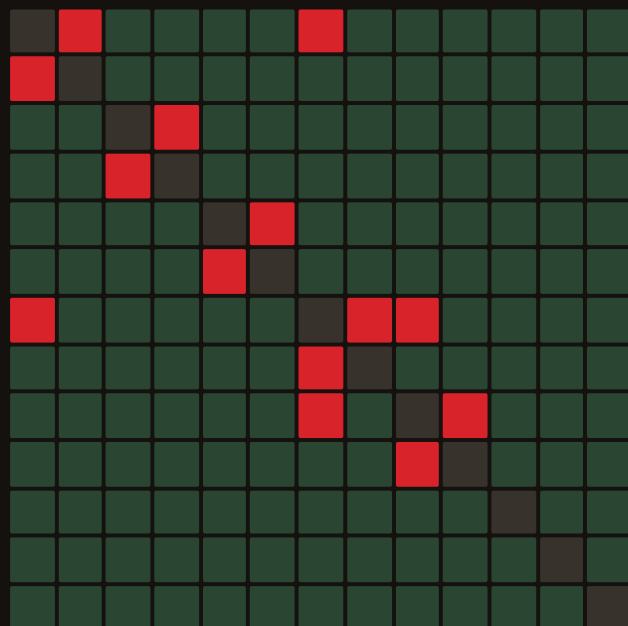

03 Validate with Z3 (Microsoft Research)

Industry-standard SMT solver returns SAT / UNSAT — a formal proof, not a vibe check.

04 Surface conflicts to the auditor

Annotated, traceable, exportable. Stops a \$200K finding from shipping in your control set.

SOC 2 — Trust Services Criteria

ISO/IEC 27001:2022 —
Annex A

Compatible Logical conflict Self

Two revenue lines. **One re-rate** of a tired category.

LINE 01 — PLATFORM SAAS

\$15 / month, per API.

Per-framework, per-integration metering. Designed for the lean team that would never sign a \$30K starter contract — but will happily pay a credit-card subscription that scales as they grow.

Unlimited · SSO · conflict
detection · priority

LINE 02 — ENGINE LICENSING

A reasoning core, sold to the rest of the market.

The Boolean LLM Engine is open-source for community use and **commercially licensable** for embedded use cases: control-mapping inside other GRC tools, policy reconciliation for regulators, contract-clause analysis for legal-tech.

- Enterprise license — annual seat & usage based
- OEM embedding into adjacent compliance and legaltech stacks
- Federal / regulator pilots — formal proofs hold up in audit
- Research partnerships with universities & standards bodies

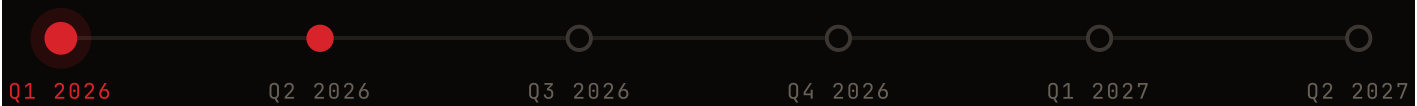

Incumbents **left the bottom** of the market wide open.

VENDOR	PRICE ENTRY	FRAMEWORKS	AI / LLM	OSS ENGINE	FORMAL PROOF
Stratasynthia	\$15 - \$299 /mo	10+	●	●	●
Drata	\$12K - \$40K /yr	20+	◐	○	○
Vanta	\$7.5K - \$30K /yr	20+	◐	○	○
MetricStream	\$60K+ /yr	Enterprise	○	○	○
Internal spreadsheets	Headcount cost	Whatever fits in Excel	○	○	○

● Wedge: we win the long tail incumbents can't price for — and use the Boolean LLM Engine as a moat the long tail can't replicate.

From engine release to **agentic compliance** in six quarters.

Hover any milestone — each one is an investable proof point with a measurable outcome.

Q1 2026

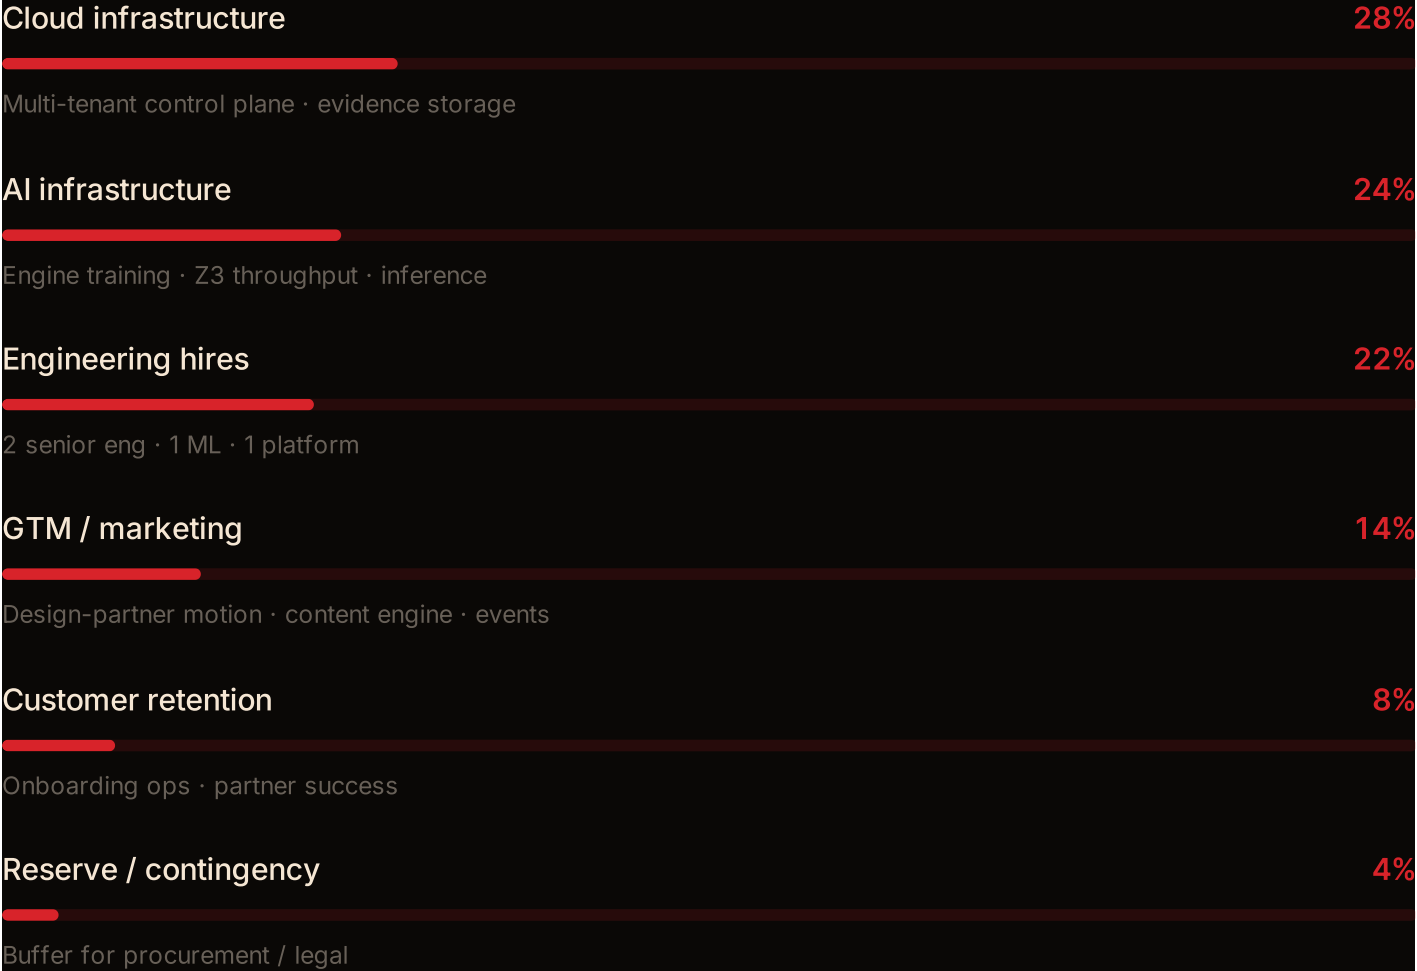

Engine release · OSS launch

Boolean LLM Engine open-sourced. SOC 2 + ISO 27001:2022 conflicts detected publicly.

- Engine v0.1
- 557 clones / 48h
- Z3 integration

12 months of runway, six quarters of compounding evidence.

ALLOCATION

WHAT THAT BUYS

- 01

GA platform with 10+ frameworks live.

SOC 2, ISO 27001, HIPAA, PCI, DPDP, GDPR, ISO 42001, NIST CSF.
- 02

Engine commercial line opened.

First enterprise license + one OEM partner signed.

03

Design partners → paying customers.

Convert >60% of design partners onto Growth / Scale tier.

04

Series A readiness.

Predictable ARR, OSS distribution moat, enterprise reference logos.

Compliance is the **silent tax** on every sector you fund.

M-VenturePartners writes **\$250K – \$1M** initial and **\$1M – \$3M** follow-ons into Financial Services, Health & Bio, and Consumer companies across India & Southeast Asia. Every single one of those sectors is a regulated industry. Every single portfolio company will pay a GRC bill — and most of them can't afford the one Drata sends.

Stratasynthia is the GRC layer your portfolio will adopt by default. You can fund the layer once, or pay for it 30 times.

FINANCIAL SERVICES

PCI DSS • SOC 2 • DPDP • RBI

Compliance is the licence to operate. Stratasynthia turns months of audit prep into a continuous signal.

HEALTH & BIO

HIPAA • ISO 27001 • ISO 13485

Patient data, medical devices, clinical workflows — every one of them needs proof, not promises.

CONSUMER

GDPR • DPDP • PCI • SOC 2

B2C scale means data scale. The moment growth hits enterprise buyers, GRC becomes a procurement gate.

What we're asking for, specifically.

- An intro conversation with a partner who has run a regulated company.
- If aligned — pre-seed lead or co-lead with operational support on GTM in India & SEA.
- Either way, we'd love to be the compliance partner for your portfolio. We can start there.

Portfolio benefit, post-funding.

Every M-VenturePartners portfolio company gets Stratasynthia's platform and the Boolean LLM Engine at **a fraction of list price** — a baked-in compliance moat across FinServ, Health & Bio, and Consumer companies you back. One investment, GRC handled for the entire fund.
